Testimonial Presented. An interesting event was the resignation of Mrs. Hugh Fraser, the veteran president of the Kingston Local Council, who hasn't missed a meeting in the past years during which she has held office. A testimonial of appreciation was sent to her by the executive, at least one of whose members can boast of similar faithfulness, for Mrs. Fraser also has not missed a session. Financially, the Council was never better off. The treasurer's report showed a substantial balance, which was further increased by a pleasant surprise when Mrs. Albert Goddard had made herself a life member, thus contributing \$100, as a testimonial to her opinion of the good work done by the council.

Question No. 59 Messrs. Ryrie Bros. Limited, Jewelers and Silversmiths, Toronto. Dear Sirs: Last week I read your interesting articles on the different stages of development of the Fork and Knife, and I am taking the liberty of writing for some information as regards the Spoon. Yours truly, Toronto, Nov. 21, 1912. Dear Madam: The Spoon probably affords more interest than either the Fork or Knife. The primitive races leads us to believe that they conveyed hot liquids and food to the mouth by means of a shell. This shell therefore may be considered the forerunner of the Spoon. As civilization advanced and man sought more artistic forms the horns of various animals were cut in the shape of Spoons. One of these, cut from a buffalo horn, is to be seen to-day in the Philadelphia Museum. The next material to be used for Spoons was wood. A word "Spoon" is derived from the old English term "Spone" which means a splinter of wood. Advanced civilization, however, brought out Spoons in all manner of designs, until finally the art of the silversmith was employed to bring them to perfection. Each century has its characteristic designs and forms of Spoons. The 15th century introduced round handles, terminated in odd, grotesque forms, such as an Acorn, Lion, Bird, etc. The flat handle appeared in the 17th century in the form of a Teaspoon, which was as small as the After-dinner Coffee Spoons in use to-day. It gradually became larger to meet the requirements of more moderate use until it reached its present size. The bowl of the Spoon also changed gradually from the pear-shaped to the oval, and from the oval to the egg shape. The 19th century produced our modern Spoons—the "King's Pattern," which is still in vogue. Moderate tastes and customs have given rise to many new forms of Spoons, as the Ice Cream Spoons, Orange Spoons, Salt Spoons, After-dinner Spoons, and numerous other large and small serving Spoons. Yours very truly, Ryrie Bros. Limited 134-138 Yonge Street TORONTO
